

PT 99217

High yielding, upright pinto

PINTO BEAN

Profile:

99217, an AmeriSeed variety distributed by Seedwest, is a high yielding upright, medium variety that holds its pods off the ground. Seed color is similar to Maverick, however 99217 has a glossier seed coat. 99217 is a full season bean that should be planted by June 1st in order to utilize the full growing season.

Economic Profile:

Assuming a 210 lb./Ac yield increase over Maverick this variety can potentially increase your profit \$63.00/AC on \$30.00/cwt. beans, minus the difference in seed cost/AC. This can calculate out to an approximate \$9,504 increased profit over Maverick on a one quarter section field.

99217 VS. MAVERICK*

*Data from the MIN-DAK region

TRIAL DATA*

PT 99217

Approx. Maturity	98-102 days
Plant Type	2B
Approx. Seed Count	1,246 seeds/lb.
Disease Resistance	IR:BCMV ("I" gene); Ua

*See reverse side for disease resistance abbreviation chart

For customers around the world, ADM draws on its resources—its people, products, and market perspective—to help them meet today's consumer demands and envision tomorrow's needs.

High yielding, upright pinto

KEY TO RESISTANCE ABBREVIATIONS FOR BEANS

Plant Type 1A	Bush determinate erect stem
Plant Type 2A	Erect growth indeterminate short runners
Plant Type 2B	Erect growth indeterminate with medium to long runners
Plant Type 3B	Prostrate vine indeterminate growth with long runners
BCMV	Bean common mosaic caused by the specified strains of Bean common mosaic virus
BCTV	Curly top caused by Beet curly top virus
BGYMV	Bean golden yellow mosaic caused by Bean golden yellow mosaic virus
CI	Anthracnose caused by <i>Collectrichum lindemuthianum</i>
Psp	Halo blight caused by <i>Pseudomonas savastanoi</i> pv. <i>phaseolicola</i>
Pss	Bacterial brown spot caused by <i>Pseudomonas syringae</i> pv. <i>syringae</i>
Ua	Rust caused by the specified races of <i>Uromyces appendiculatus</i>
HR	High Resistance: describes plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. Highly resistant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
IR	Intermediate Resistance: describes plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

In cases where specific races or strains are not noted the variety is resistant to some, but not necessarily all known races or strains of the pathogen.
