

NAVY Liberty <15095>

Moderate Field Tolerance to White Mold Excellent Canner****

Navy Liberty <15095> is a broadly adapted navy bean variety ideally suited to North Dakota, Minnesota, Michigan, and Ontario production regions. A consistent performer throughout the trialing process and in commercial production, its upright architecture, high pod set, and excellent yield potential make it an excellent choice for direct harvesting and conventional growers.

Assuming the 70 lbs./AC* yield increase over HMS Medalist, profit would increase \$21/AC on \$30/cwt beans. This would amount to \$2,100 increased profit over HMS Medalist on 100 acres of production while only maturing out 1–2 day later than HMS Medalist**.

- Excellent upright architecture suitable for direct harvest.
- Matures 96–100 days or about 1–2 days later than HMS Medalist**
- Approximate seed count of Liberty is 2,295 sds./lb. as compared to HMS Medalist at 2,415 sds./lb****
- Liberty <15095> has shown some moderate field tolerance to white mold and yielding through white mold pressure. Spraying for white mold is still recommended with this variety.
- Liberty <15095> has the “1” gene for bean common mosaic virus shown similar resistance to rust as HMS Medalist in the CSU rust trials.
