

ADM in Canada

ADM is a global leader in innovative solutions from nature, powering industries ranging from beverages to biofuels, home care to home insulation, probiotics to pet treats. Since 1927, we've connected Canadian farmers to customers both in Canada and around the globe with a value chain that starts at the farm gate and ends on the store shelf.

We partner with Canadian farmers to purchase crops, and then utilize our significant Canadian transportation, storage and manufacturing capabilities to transform those crops into products like biodiesel, wheat, animal feed and more. Our Canadian team is almost a thousand strong, and our footprint includes oilseed processing, wheat milling and starch, and feed mills for production animals and pets. We're proud to serve many well-known Canadian consumer brands, and we're equally proud to be a foundation of Canada's agriculture, transportation, and food industries.

Supporting a Bright Future for Canada

ADM is proud of its deep roots in Canada, and committed to supporting a strong future across the Canadian industries and communities that we're part of.

We work with farmers to strengthen their businesses and legacies, including through our regenerative agriculture program, which helps support the soil, water and air that crops depend on.

We work with communities, supporting charitable efforts that help relieve hunger and offer education in agriculture and food production.

We work with partners both public and private to support policies and investments to enhance Canadian food security and ensure strong manufacturing and transportation industries that drive good jobs and economic growth.
